CHAAPEL'S SEED STORE

39 East Third Street

Williamsport, Pa.

For FINER Lawns Sow
CHAAPEL'S *Higher Quality* LAWN GRASSES
A Mixture For Every Soil and Shade Condition

TESTED—FRESH—RELIABLE

Cheap seed is false economy. It often spells discouraging failures and unnecessary expense. They are usually composed of annual grasses which are hard to cut and contain large quantities of impurities such as chaff and weed seed. Play safe and get the best.

CHAAPEL'S CLOVER LAWN GRASS SEED
Recleaned and Tested Seed
(Weighing 30 Pounds to the Bushel)

Our mixture absolutely can be relied on as being made up of the finest quality of grass seed obtainable, free from weeds seed, chaff or fallow and of the very best and highest germinating qualities. It is a special mixture of grasses that do best in our soils. The increasing demand for a lawn seed

having a larger proportion of White Clover induced us to offer this mixture which contains a most liberal quantity of best recleaned White Clover. While primarily made up for normal locations, it contains certain grasses that will thrive on partially shady places. Sow 1 quart to 200 square feet (10 x 20 ft.). Pt. 25c., qt. 40c. (postpaid 50c.), 2 qts. 75c., 4 qts. \$1.40, pk. \$2.25, bus. (30 lbs.) \$8.00. Postage extra.

CHAAPEL'S SHADYGREEN LAWN SEED

While it is impossible to maintain a permanent lawn in certain shady locations, such as under soft maple trees, we have combined in this mixture certain grasses that are more resistant to these harsh conditions. We recommend this mixture to be especially prepared for shady locations. Sow 1 quart to 100 square feet (10 x 10 ft.). Qt. 55c., 2 qts. \$1.00, 4 qts. \$1.90, pk. \$3.50, bus. \$12.00.

ROOTONE "Harmonized Grass Seed"
THE SCIENTIFIC METHOD FOR LUXURIOUS LAWNS!

Harmonized Grass Seed has taken the mystery out of fine lawn making. To get the lawn that you have always wanted, be sure that the soil has good drainage. If it is a heavy clay, loosen it with an application of some form of humus.

Rootone treated Lawn Seed germinates faster, develops deeper, stronger root growth: The larger root system taps lower water and food levels in the ground, thereby

bringing more food and moisture to the grass plants.

Quicker germination, faster growing and stronger root growth produces a thicker, heavier turf, which is more drought resistant. The denser growth of the grass discourages the growth of weeds, giving you a cleaner, nicer lawn.

Lb. 65c., 5 lbs. \$3.00, 100 lbs. \$50.00

Agricultural extension departments, landscape gardeners and athletic directors sometimes prescribe special lawn grasses for difficult locations and sport fields. We are in position and invite inquiries on Special Grass Mixtures.

HYBRID SWEET CORN — Wilt Resistant Hybrids

One of the most successful and interesting plant breeding achievements of recent years is the production of hybrid sweet corns that actually yield 25 per cent to over 100 per cent more than the old favorites, and that are amazingly uniform and of wonderful quality.

Golden Cross Bantam. Shows great ability to withstand wilt and adverse weather conditions. Has large, uniform golden ears, and matures in about 95 days. Pkt. 10c., $\frac{1}{2}$ lb. 25c., lb. 40c.

Improved Bancross. Average time to maturity 90 days. Ears 12-14 rowed, and 8-9 in. long. Stalks 6 to 7 ft. tall. Resistant to bacterial wilt. Pkt. 10c., $\frac{1}{2}$ lb. 25c., lb. 40c.

Marcross 39. Good heavy ears, 12-14 rowed, 7-9 in. long. Matures in 79 days. Wilt-resistant. Pkt. 10c., $\frac{1}{2}$ lb. 25c., lb. 40c.

Sencross. Large ears, 7-10 in. long, and 12-16 rowed. Average time to maturity 84 days. Resistant to bacterial wilt. Heavy cropper. Pkt. 10c., $\frac{1}{2}$ lb. 25c., lb. 40c.

Top Cross Spanish Gold. Four days earlier than Golden Bantam and generally twice as productive, the attractive 8-in. 12-rowed ears command a premium on the market. Produces heavy crops in areas where Golden Bantam succumbs to bacterial wilt (Stewart's Disease). Compares favorably with the Evergreens in canning cost. Pkt. 10c., $\frac{1}{4}$ lb. 15c., $\frac{1}{2}$ lb. 25c., lb. 40c.

Early Bancross. This topcrossed Bantam is produced from an especially selected, large eared strain of 8-rowed Golden Bantam. It produces 8-14 rowed, cylindrical ears of good quality and color, and matures 3-4 days earlier than other available stocks of topcrossed Bantam. It carries a high resistance to bacterial wilt. Pkt. 10c., $\frac{1}{4}$ lb. 15c., $\frac{1}{2}$ lb. 25c., lb. 40c., 5 lbs. \$1.75.

HYBRID FIELD CORN

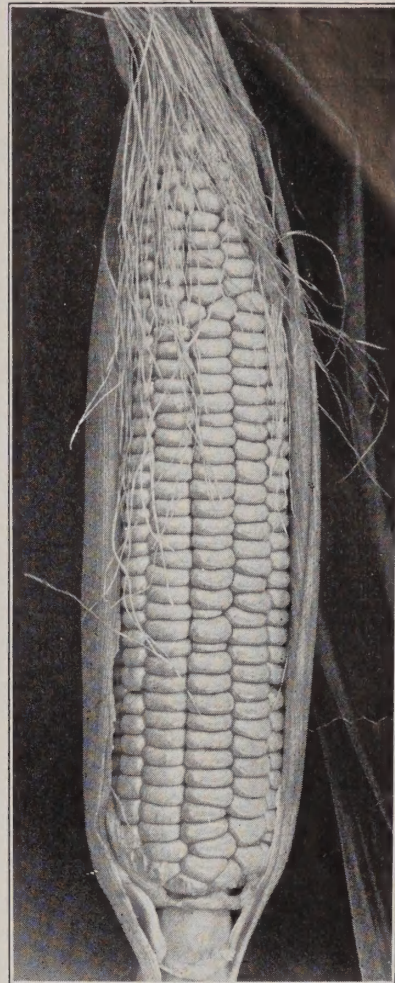

Blight, drought and wilt resistant. It is reported that 75 per cent of the corn grown in the Great American Corn Belt is of hybrid varieties. Much work has been done by the scientists on corn in the corn belt. Here in the East we have watched and awaited developments, trying out the various varieties on a conservative scale. We are now happy to report that some of these hybrid varieties do exceedingly well in Lycoming County.

K 23 Hybrid Field Corn. The past season the K 23 was tried out in numerous locations in Lycoming County showing excellent results. K 23 is a corn of nice height, leafy and with deep and spreading roots. At harvest time it was not lodged. This corn produced a yield of over 15 per cent over high grade open pollinated White Cap Yellow Dent. Like most hybrids, K 23 fills out to the tip of the ear, the kernels are deep, 16 to 18 rows, the cob small. An ideal husking corn for Lycoming County. Bu. \$7.50.

GARDEN PEAS

One quart will plant about 100 feet of drill

Peas do best in a light, rich soil; for private use sow in double rows 6 to 8 inches apart, the rows 2 to 4 feet apart, the tall ones requiring brush. Commence sowing the extra early varieties as soon as the ground can be worked in March; continue for a succession every two weeks until June. A good crop can be secured by sowing the extra early sorts in August for Fall use. The wrinkled varieties are not as hardy as the small round sorts, and if planted early should have a dry soil, or they are liable to rot in the ground; they are, however, the sweetest and best flavored.

Prices of Peas unless otherwise noted are as follows: $\frac{1}{4}$ lb. 10c., $\frac{1}{2}$ lb. 15c., lb. 25c., 5 lbs. \$1.10, 10 lbs. \$2.00.

CUPRO-K for Vegetables

As a substitute for Bordeaux Mixture, Cupro-K (as a spray or in a dust) is of especial value in controlling diseases of such sensitive crops as cucumbers, cantaloupes and tomatoes. Bordeaux Mixture increases normal water loss and causes stunting and, frequently, blossom drop. Cupro-K permits normal growth, blossoming, and fruiting. It is safe and, in addition, effective and economical.

Cupro-K is packed in 3-lb. bags. 18c. lb.

Alsike, or Hybrid Clover

Alfalfa. Northwestern-grown alfalfa produces from 3 to 7 tons of hay to the acre. It has as much protein as wheat-bran. Three hundred and sixty stalks have been grown from 1 seed. It does not exhaust the soil; it enriches the soil. It will grow three to five crops a year. Alfalfa in money value is worth 45 per cent more than other clovers and 60 per cent more than timothy. Ten milch cows can be fed on less than 2 acres by soiling. Lb. 35c., bu. \$15.50.

Canadian Variegated Alfalfa. This Alfalfa was developed in Ontario, Canada, and is a cross between Grimm and Northwestern. It comes to us field-inspected and certified to be 60 per cent variegated flowered. It does not spread as much as the Grimm or common. It is recommended by the Experiment Stations for northern Pennsylvania and New York State. Lb. 40c., 10 lbs. \$3.50, bu. \$18.50.

Grimm. We have the genuine certified Grimm Alfalfa produced in the Northwest, where the climate is colder for longer periods than in the eastern States. More hardy than the common, has a different root system and comes through on soils that will not maintain the common variety. Comes in sealed containers certifying its genuineness. Lb. 40c., 10 lbs. \$3.50.

Crimson, or German Clover (*Trifolium incarnatum*). Erect annual, 1 to 2 ft. high, with bright scarlet flowers. It is largely grown for improving the soil by turning under. It is a valuable crop for pasture or green manure. For hay it should be cut when in full bloom. Sow 20 lbs. to the acre. Lb. 25c.

Mammoth Red Clover. (Domestic-grown) Pea Vine or Sapling Clover. A large, rank-growing clover, ripening at the same time as timothy, producing an enormous yield. It is a valuable plant for our depleted, worn-out hills, producing a satisfactory yield. Our stock of this clover is the Genuine Mammoth. Lb. 35c., bus. (60 lbs.) \$11.00. (Prices subject to market changes.)

Medium Red Clover. (Domestic-grown)

Red or June Clover is probably more generally grown than any other. This crop is the stand-by for American farmers, both for hay and soiling. Much publicity has been given this important crop during the past few years as to the adaptability of seeds from Southern sections when planted in the Northern States. It is agreed among investigators that seed for planting under Pennsylvania farm conditions should be northern-grown, to stand our harsh Winter and early Spring conditions. We take great pains to offer our trade only seed of the Medium Red variety that is northern-grown, as free as possible from weeds, and of the best germination. Our Domestic Medium Red Clover is always the best procurable. Lb. 30c., 10 lbs. \$2.75, bu. \$10.50.

IMPORTED CLOVER SEED

By Government act this seed is stained a green color to distinguish it from non-adaptable Italian Seed. Our customers who have been growing this seed report that their results are equal to the results obtained from domestic seed. This but confirms experimental station reports. Lb. 25c., bu. \$10.00.

ALSIKE OR SWEDISH

This is one of the hardiest varieties known. It is perennial and does not winter-kill. It will do better on moist land than any other variety of clover, and is suitable for either hay or pasture. When sown with other grasses, it forms a thick undergrowth and greatly increases the yield. It is frequently sown both with Medium Red and with Timothy. Lb. 35c., 10 lbs. \$2.50. (Prices subject to market changes.)

Perennial WHITE SWEET CLOVER

(*Melilotus alba*)

Inoculate
this seed with
NOD-O-GEN

A legume of immense size and rank growth. It has great value as a soil improver. It fur-

nishes a palatable hay and makes excellent pasture.

Sweet Clover will grow on almost any soil where proper amounts of lime have been applied. Its immense growth (8 to 10 ft.) and its ability to gather nitrogen from the air and deposit it in bacterial nodules on the roots, together with the large amounts of humus it supplies to the soil when turned down, makes it an ideal crop to improve good soil and a splendid crop to build up poor land.

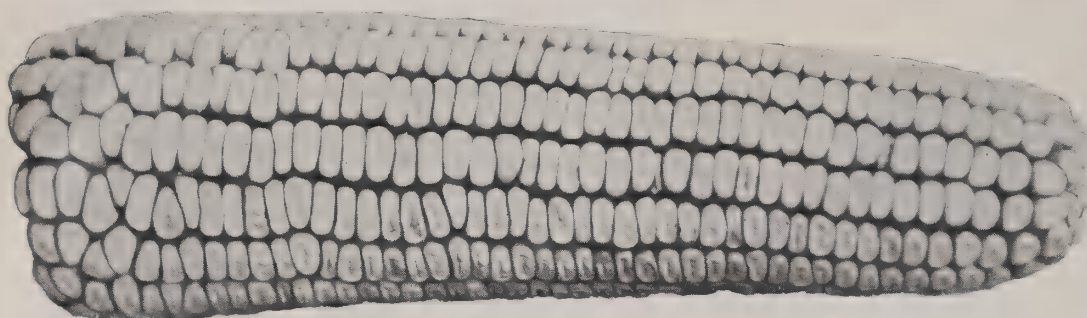

Sweet Clover. Makes a good grade of hay and it will produce a larger tonnage than any other legume crop; it averages two or more cuttings per year. Lime well for sweet clover, at least $\frac{1}{2}$ ton hydrated lime per acre, or its equivalent. Sow 25 lbs. per acre. Lb. 20c., 10 lbs. \$1.25, bu. \$5.50.

Yellow Sweet Clover (*Melilotus officinalis*)

This is also a biennial similar to White Blossom Sweet Clover, and used for the same purpose. It has a yellow blossom and is about two weeks earlier and not so tall. It does not grow so heavy and coarse. It lays closer to the ground and is considered superior for pasture and makes a finer grade of hay. For those who do not like the White Sweet Clover on account of its rank growth we would recommend the Yellow Blossom. Lb. 20c., bu. \$6.00

As the market rates on Clover and other farm seeds are continually fluctuating, the prices here quoted are those prevailing as we go to press, and are inserted as a guide. As the market advances or recedes, our prices are also changed. Write for prices before ordering.

CERTIFIED CORN HYBRIDS

Hybrid Field Corn. Last year it was estimated that 75 per cent of the corn planted in the Corn Belt was Hybrid Corn. There would have been more if there had been sufficient seed. Hybrid Corn yields 10 to 30 bushels more to the acre, has a larger stalk and a better root-system, and is more disease-, storm-, and drought-resistant. The strains we offer are varieties suitable for Northern Pennsylvania and Southern Tier New York State Counties.

Ohio Hybrid, M 15. This is a new hybrid offered to the farmers for the first time last year. It is the earliest one certified in Ohio. It is especially suited for Pennsylvania and New York. Pk. 14 lbs. \$2.00, bu. 56 lbs. \$7.50.

Ohio K-23 Hybrid. One of Ohio's best 90-day hybrids. It is very drought and wind resistant, and grows a stalk 7 ft. tall. The ears are medium in size, tapering, with 16 to 18 rows. Pk. (14 lbs.) \$2.00, bu. (56 lbs.) \$7.50.

29-3 Double Crossed Corn (Ensilage). The best hybrid field corn for New York and New England. During a five-year period in which this corn was thoroughly tried out in many locations in New York State by the Department of Plant Breeding at Cornell University it produced practically the same amount of green weight as Sweep-stakes, but exceeded that variety in dry weight by 11 per cent and in grain about 55 per cent.

This new hybrid corn is the result of years of work by the Department of Plant Breeding at Cornell University. Since the introduction of this new variety it has become very popular. This is due not only to the enormous crops but also because of the high proportion of digestible food in the ensilage which makes it the most economical ensilage corn to grow.

In most parts of New York State and in Southern New England, 29-3 can also be successfully used for a heavy yielding grain corn.

N. Y. State Certified Seed. 2 lbs. 50c., transportation paid. Not paid: pk. (14 lbs.) \$1.50, bu. (56 lbs.) \$5.25, 2 bu. bag \$10.00.

SEED POTATOES

CERTIFIED AND SELECTED STOCK Potatoes sold by weight only; 60 lbs. to bu. Write for prices on bus. or bag 150-lb. lots

Irish Cobbler. Very productive and matures early. Shape chunky; eyes strong and deep set; skin netted; flesh white, of very superior quality. Selected stock, pk. \$1.00.

Red Bliss Triumph. This variety combines the productiveness of the Peerless with all the good qualities of the Early Rose. It is more productive, and matures its crop at least a week in advance of Early Rose. Selected stock. Pk. \$1.00.

Pure Early Rose. The good old favorite; pure and true. Every farmer and gardener knows the good Early Rose Potato, and nothing need be said in its favor. Our seed is grown in New York state, and we can offer it as the purest and best that can be had. Pk. \$1.00.

Early Ohio. A few days earlier than the Early Rose, and similar in color and habit of growth; quality dry and mealy. Pk. \$1.00.

Smooth Rurals. Also called **Heavy Weight or No. 9.** The potatoes are round to oblong, have fairly numerous medium shallow eyes, purple sprouts, and smooth white skin. The vines are rather stocky and very vigorous and resistant to disease. This is one of the best of the Smooth Rural or Carman class and is fast replacing many other kinds for the late or main crop. Pk. \$1.00.

Green Mountain. Grow for fine quality. If you want nice mealy white potatoes of the finest quality, raise Green Mountains. They are far superior to most of the kinds usually raised. Pk. \$1.00.

Warba. If you want extra early potatoes: Try the New Warba! This new potato which was introduced by the Minnesota Experiment Station is 10 days earlier than Irish Cobbler, and a week earlier than Triumph. Comparative tests have shown the yield also to be better than the Cobbler. The vines are sturdy, upright and remarkably resistant to disease, especially mosaic. Pk. \$1.00.

New Improved SEMESAN BEL

Quick dip treatment; effective against seed-borne scab and Rhizoctonia. Costs only 1½c. to 3c. a bushel. 2 ozs. 25c., 1 lb. \$1.50, 5 lbs. \$6.50, 25 lbs. \$31.00.

SOY BEANS

(The Great Soil-Improver)

Wilson. This variety in some ways excels all others as a forage crop. The stalks and branches are slender and we think probably it would make the most hay and a little the best quality of any variety. It matures in 125 days. Sow 40 lbs. to the acre. Bu. \$2.50.

VETCH

Inoculate this Seed with NOD-O-GEN

Sand, Winter, or Hairy Vetch (*Vicia villosa*).

Thrives on poor, arid, sandy soils. It may be sown either in Fall or in Spring, mixed with rye, for a support. Grows 3 to 4 ft. high and can be cut as soon as the bloom appears and again for the seed. Perfectly hardy. Sow 50 lbs. to the acre. Price variable. Lb. 15c.

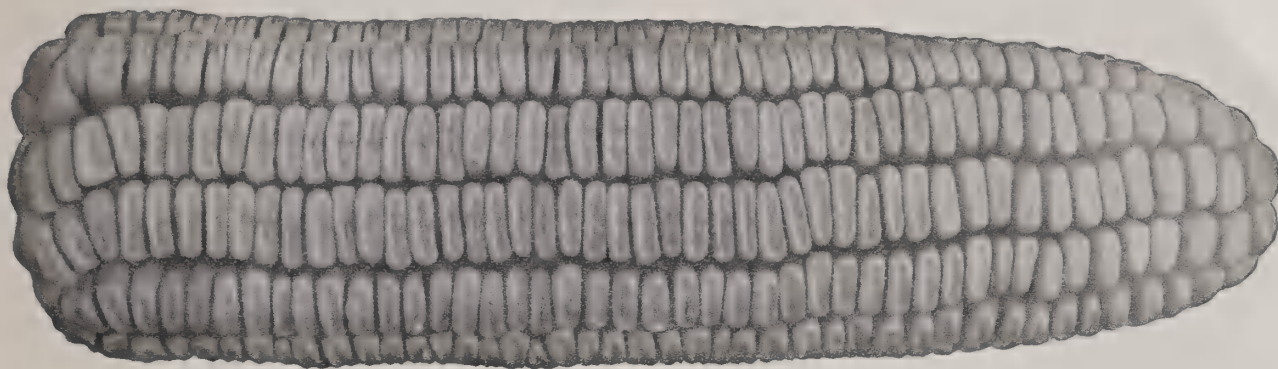

Hairy, or Winter Vetch

CANADIAN FIELD PEAS

There is no crop grown on the farm as valuable for Summer feeding as Canada Field Peas and Oats, and they are equally valuable in the silo or as hay

It is used both as a green feed and as a fertilizer, and in both places deserves to occupy a very prominent position. As green feed sown with oats or barley early in the Spring, it fills a place that no other plant which we have can occupy. Pk. \$1.25, bu. \$4.00.

If wanted by Parcel Post, add postage, 10 cents extra for first pound, 1 cent for each additional pound.

Blue Ridge Ensilage Seed Corn

FIELD AND ENSILAGE SEED CORN

Blue Ridge Ensilage Seed Corn. A variety of Ensilage corn of great merit. Blue Ridge Ensilage is at least three weeks earlier than its famous prototype, Eureka Ensilage, with all its good qualities and none of its faults. It is a product of the Blue Ridge Mountains of West Virginia, bred for earliness so as to give a glazed ear in this locality at harvest-time. It grows 12 to 14 ft. high, on a thick, heavy stalk, well filled with leaves which retain their color well to the ground until harvested. The ears average 10 to 12 in. long; the grain is broad, thick and white, containing an unusual amount of sugar, making this variety the ideal ensilage corn, insuring an appetizing and good-keeping silage. (See illustration from an actual photograph, two-thirds natural size.) Pk. \$1.25, bus. \$4.00.

Virginia-Grown Eureka Ensilage Corn. It is the largest corn we know of; grows from 14 to 18 ft. high, on stalks 2 to 2½ in. in diameter, and has a vast amount of foliage. If it is a question of tonnage on your farm, grow Eureka Ensilage Corn. It gives you a succulent, palatable, cheap feed the year around. The seed we offer is the genuine Eureka, grown in the Shenandoah Valley of Virginia, and will give one of the largest crops of ensilage corn you have ever had. Pk. \$1.00, bus. \$3.50.

Lancaster County Golden Sure Crop. We have procured reliable seed stock from growers recommended to us by the Lancaster County Farm Bureau. This is a large-growing corn, 12 to 14 ft. high, with long ears and a large amount of leaves, making it an excellent silage corn. Will not mature for grain in a short season in Northern Pennsylvania and New York. Fine for silage in these locations. Pk. \$1.00, bus. \$3.50.

Longfellow Flint. This for a long time has been the popular, 8-rowed Yellow Flint corn. It is a very productive variety; ears 12 to 14 in. long and matures where the Yellow Dent fails. Pk. \$1.00, bus. \$3.50.

New Improved Semesan Jr.

Easy dust treatment; protects seed against rotting; improves stands; reduces seedling blight and increases yields. Average increase, 4 bu. per acre. 2 oz. 15c., 4 oz. 30c., lb. 75c., 5 lbs. \$3.25.

West Branch Sweepstakes Ensilage Seed Corn.

This corn originated in Lycoming County, Pennsylvania. Our stock is original and is grown in Lycoming County. The genuine West Branch Sweepstakes is a big corn. The stalks are very large, 1½ to 2 in. in diameter and 12 to 15 ft. high. The foliage is long, broad, and heavy, starting well down to the ground, with an abundance of leaves, and produces from 15 to 25 tons of silage per acre. The ears are large, averaging 12 in. long and 10 in. in circumference, containing 14 to 20 rows of red and golden grains, with a decided reddish cast. Pk. \$1.00, bus. \$3.50. Subject to change.

Quenshenaque Yellow Dent. An early-maturing Yellow Dent, grown and bred on the hills of Lycoming County. A corn of good size and a sure-cropper. It is a beautiful Yellow Dent with just enough White-Cap blood in it to give it strong vitality and early maturity. It matures in 90 to 100 days; the stalks are 7 to 8 ft. tall, and the ears 8 to 10 in. long. We feel safe in recommending this corn to the growers on hill farms on account of its extreme earliness and strong vitality. Pk. 75c., bus. \$2.50. Subject to change.

White-Cap Yellow Dent. This corn has never failed to mature properly; vigorous habit, large foliage, and a sure cropper. The ears are large—9 to 11 in. and 14- to 16-rowed—well filled out and showing practically no gloss whatever, thus demonstrating its well-bred propensities. The grains are large, beautiful lemon-yellow, and white-capped. Pk. 75c., bus. \$2.50. Subject to change.

ROSE CULTURE

A fungicide, insecticide and plant stimulant all in one spray

Roses that are permitted to become afflicted with insects and fungus diseases will lose their vitality and will not yield beautiful blooms.

TRI-OGEN not only protects roses against all fungus diseases and insect pests, but it stimulates vigorous plant growth and assures healthy green foliage and luxuriant blooms.

...it is the most revolutionary discovery ever made in the history of rose culture. It is the most highly recommended product of its kind.

EVERBLOOMING, or HYBRID TEA ROSES

This class of Rose is most satisfactory, since they continue to flower throughout the entire season from early Summer until frost. They are hardy, but it is advisable to give Winter protection. The following list contains the choicest varieties only.

PATENTED RECENT INTRODUCTIONS

Countess Vandal (Plant Patent 38). A vigorous Rose with long, pointed, orange-copper buds. The flowers are brilliant pink with a salmon glow and richly fragrant. Ea. \$1.25.

Dickson's Red. First award "All-America Rose Selections" for Hybrid Teas, 1940. (Plant Patent 376.) (Retail \$1.25 each.) A glowing scarlet red Rose from the Emerald Isle. The ripe warmth of its color is constant, its abundant bloom unflagging all through the Summer. Happily, also, it is rich in the fragrance you instinctively expect in a red Rose. If the sun has been cruel to your reds, here is a "must have" for your list—it defies the hottest sun's rays and retains its color undimmed.

Pearl S. Buck (Kordes 1940). (Plant Patent 423.) (Retail \$1.50 each.) This beautiful golden yellow Rose is now offered for the first time this year. The pointed orange bud is freely produced on a vigorous growing bush amply supplied with dark green foliage. The stems are long and excellent for cutting. As the bud opens, it lightens to a deep yellow with tinges of apricot. A superb combination. Lovely fragrance; medium height.

Eclipse (Plant Patent 172). An international sensation. The long stream-lined bud, enhanced by ornamental sepals, is of rich gold without shading. Petals are large and tough, but not numerous, averaging 20 to 25, with more in the Autumn. One of the most popular of the new patented H. T. varieties. Gold medal American Rose Society. Ea. \$1.25.

Rex Anderson (Plant Patent 335). (Retail \$1.25 each.) Handsome buds and Roses of great size. Cream, turning pure white with age. Blooms are several on each stem and come in rapid succession. The plant is very vigorous with handsome dark green foliage.

Golden Dawn

Rose bushes, like all other plants, are susceptible to many diseases. Parasitic organisms may attack any portion of the plants—roots, stems, leaves, or blossoms. The presence of disease is revealed by the discoloration of the foliage, the failure of the buds to develop normally, or the death of portions of the stems. Therefore, persons who desire to grow Roses either for their beauty in the garden or for their commercial value, should have some knowledge of the causes of such diseases and the methods by which they may be prevented or controlled.

MULCHING TOBACCO

Ground tobacco stems for mulching Roses and other Perennials. 100 lbs. \$3.50.
